

Beverage Mixer/Aerator

ABSTRACT

- 5 A beverage mixer/aerator for attachment to a hand-held
housed motor includes an agitator for immersion in a
beverage and a rotational driveshaft to which the agitator
is affixed. The driveshaft has an air inlet port, an air
outlet port at or adjacent to the agitator and a
10 longitudinal passageway extending from the air inlet port
to the air outlet port. The agitator draws air down
through the passageway to improve infusion of air into a
beverage in use.
